Dangers of AI

Assume you get fake news from a online article or picture. Not everything online is true. Whether it be slogans, pictures, quotes or passages. Anything can get created by AI (artificial intelligence) online and it can be difficult to tell the differences from a real source or a fake one.

Imagine reading a report that says that a celebrity is living in your town. It is severely unusual as this celebrity only travels once per five years! AI (Artificial intelligence) are actually the ones creating a lot of the misunderstanding on the internet. People can get mislead very easily; even marine biologists and scientists can get decieved. Ai can do things that we humans can't do.

Worldwide daily routines of some young teenagers and adults would be going on tiktock or youtube and getting entertained with anything that they see. AI is used across the internet. Being as precise and perfect as a calculator, AI can generate deepfakes and fabricate anything anytime always reaching perfection or slight mistakes.

AI has a lot of tricks to mislead people. Influencers are the ones that promote products and the company makes profit. In this case, AI are the ones pretending to be a 'influencer'.

When you ever look at something online and you think it is something strange, ask yourself some critical questions. Is the website reliable? Could it be a deepfake? Everyone can protect themselves from AI by thinking about real life conversations which can save you from online viruses or looking if there is slogans, persuasive language or images that are too peculiar and perfect can help identify if something is created or composed by AI.

It is crucial to think carefully before believing something. Not only can it be dangerous to trust everything we see or read, it can also be life threatening and can spread misinformation. Remember to pause when you think something on the internet seems to amazing. So please always be cautious of AI danger when going online.
